

Tutorial CT02

EN

Using 3D views,
Selection Toolbar

The 3D views are added with this button: 

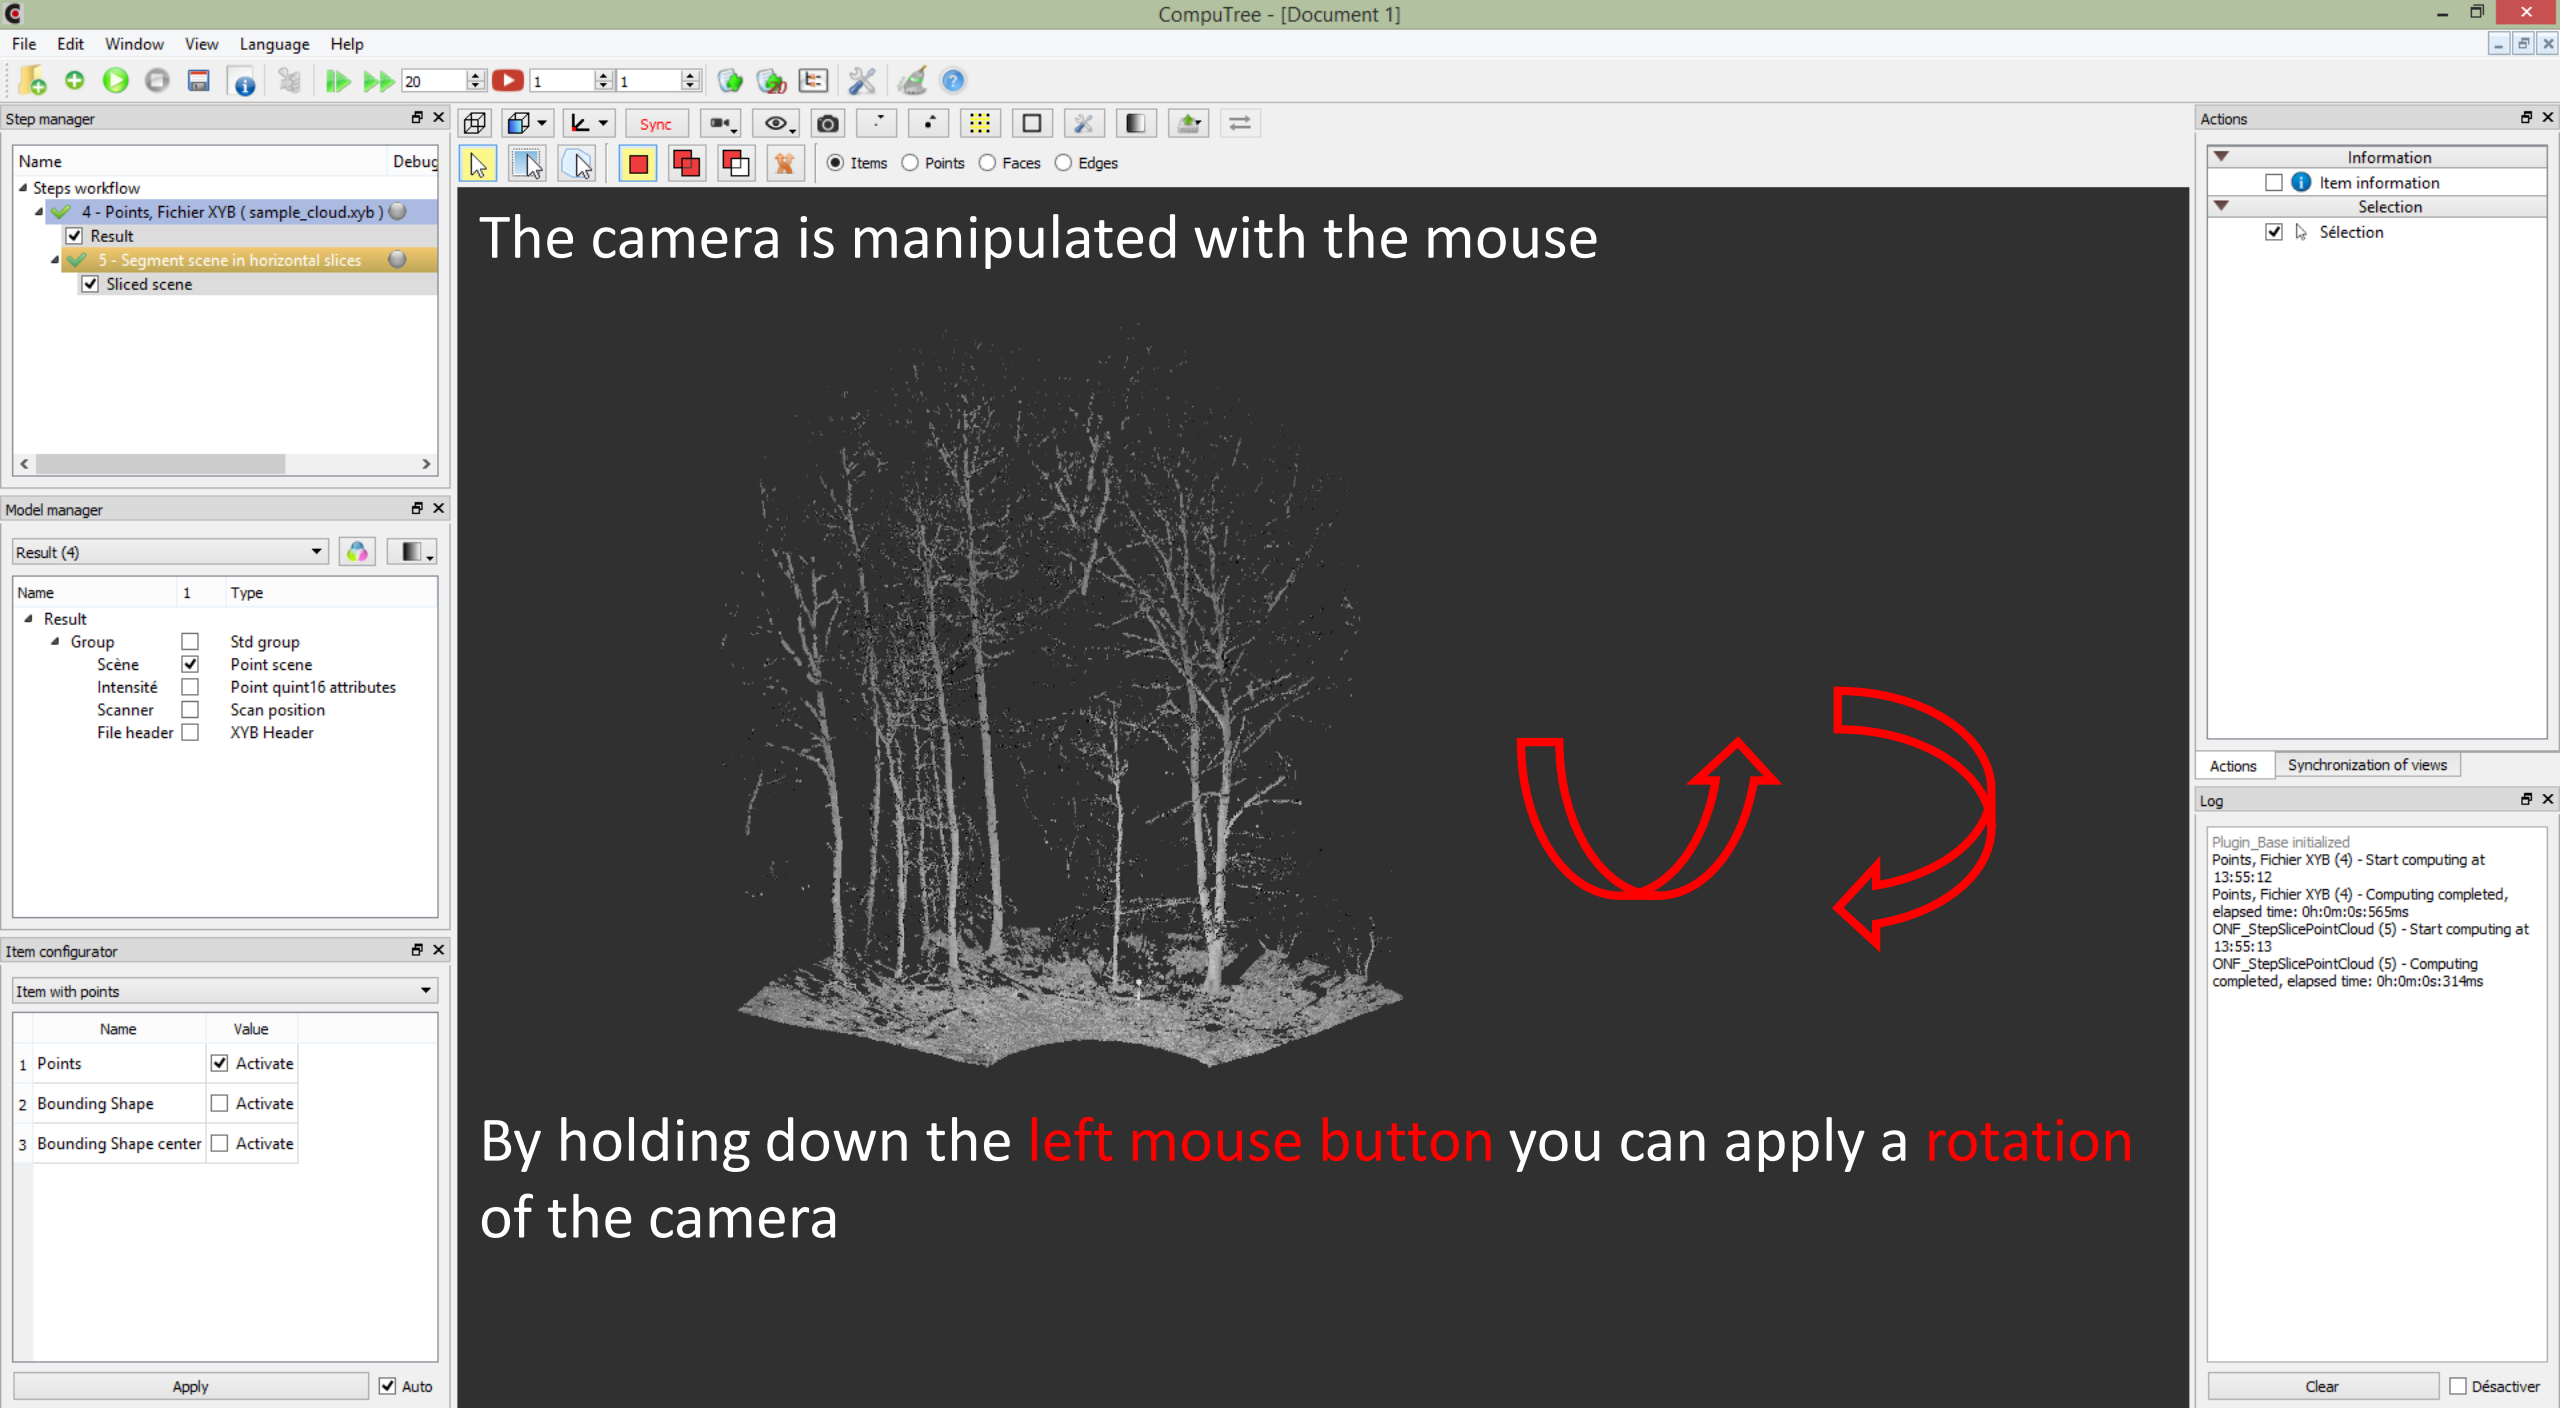

We can add as many views as necessary

The name of each view is shown in its title bar:

- Document 1
- Document 2
- ...

When a document is maximized, its name appears in brackets in the Computree title bar:

The camera is manipulated with the mouse

By holding down the **left mouse button** you can apply a **rotation** of the camera

The screenshot displays three overlapping windows from a software application:

- Step manager (top):** Shows a workflow with two steps:
 - Step 4: "4 - Points, Fichier XYZ (sample_cloud.xyz)" with a checked "Result" checkbox.
 - Step 5: "5 - Segment scene in horizontal slices" with a checked "Sliced scene" checkbox.
- Model manager (middle):** Displays the "Result (4)" model. It lists various attributes with checkboxes:
 - Group: ☐ Std group
 - Scène: ☒ Point scene
 - Intensité: ☐ Point quint16 attributes
 - Scanner: ☐ Scan position
 - File header: ☐ XYZ Header
- Item configurator (bottom):** Shows the "Item with points" configuration table:

	Name	Value
1	Points	<input checked="" type="checkbox"/> Activate
2	Bounding Shape	<input type="checkbox"/> Activate
3	Bounding Shape center	<input type="checkbox"/> Activate

The camera is manipulated with the mouse

By holding the **right mouse button** you can apply a **translation** of the camera

Centered on the barycenter of the **selected** elements

The main 3D view shows a point cloud of a forest scene, segmented into horizontal slices. The slices are represented by colored bounding boxes (green, blue, orange, red, yellow, purple). The point cloud is colored by slice. A red circle with a crosshair and a red arrow points to the center of the slices, indicating the barycenter. The text 'Centered on the barycenter of the selected elements' is overlaid on the view.

The 10th button allows to set the display mode. The button allows looping between 3 display modes:

- All points are displayed (accurate)
- Only a part of the points is displayed (optimized)
- Only a part of the points is displayed during the movements, but when the movements stop, all points are displayed (optimized during movements, accurate when it stops)

The 10th button allows to set the display mode. The button allows looping between 3 display modes:

- All points are displayed (accurate)
- Only a part of the points is displayed (optimized)
- Only a part of the points is displayed during the movements, but when the movements stop, all points are displayed (optimized during movements, accurate when it stops)

The screenshot displays three panels from a 3D software interface:

- Step manager:** A tree view showing a workflow. The 'Steps workflow' is expanded, revealing two steps: '4 - Points, Fichier XYB (sample_cloud.xyb)' and '5 - Segment scene in horizontal slices'. Both steps are marked with a green checkmark. Under step 5, the 'Sliced scene' option is also checked.
- Model manager:** A panel with a dropdown menu set to 'Result (4)'. Below the dropdown is a table with columns 'Name', '1', and 'Type'. The table lists several items under the 'Result' group: 'Group' (checkbox), 'Scène' (checkbox), 'Intensité' (checkbox), 'Scanner' (checkbox), and 'File header' (checkbox). The 'Type' column lists their corresponding types: 'Std group', 'Point scene', 'Point quint16 attributes', 'Scan position', and 'XYB Header'.
- Item configurator:** A panel with a dropdown menu set to 'No element in 3D view'. Below the dropdown is a large empty rectangular area for configuration. At the bottom right, there is an 'Apply' button and a checked 'Auto' checkbox.

The 11th button allows to define the projection mode:

- Orthographic (GIS mode)

- Perspective

Display normals

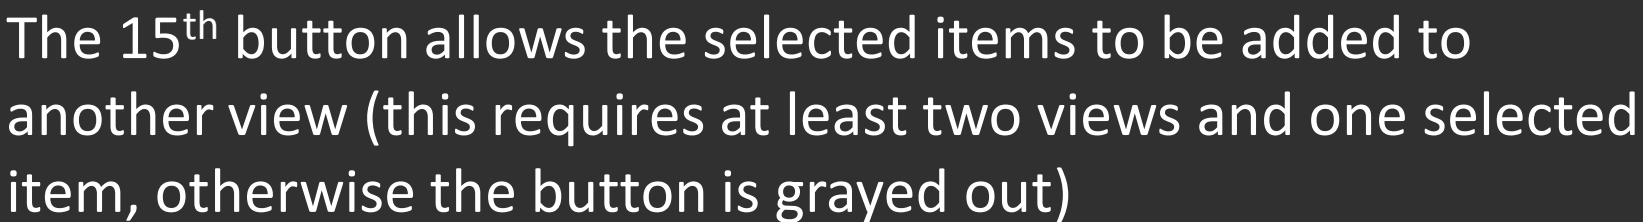

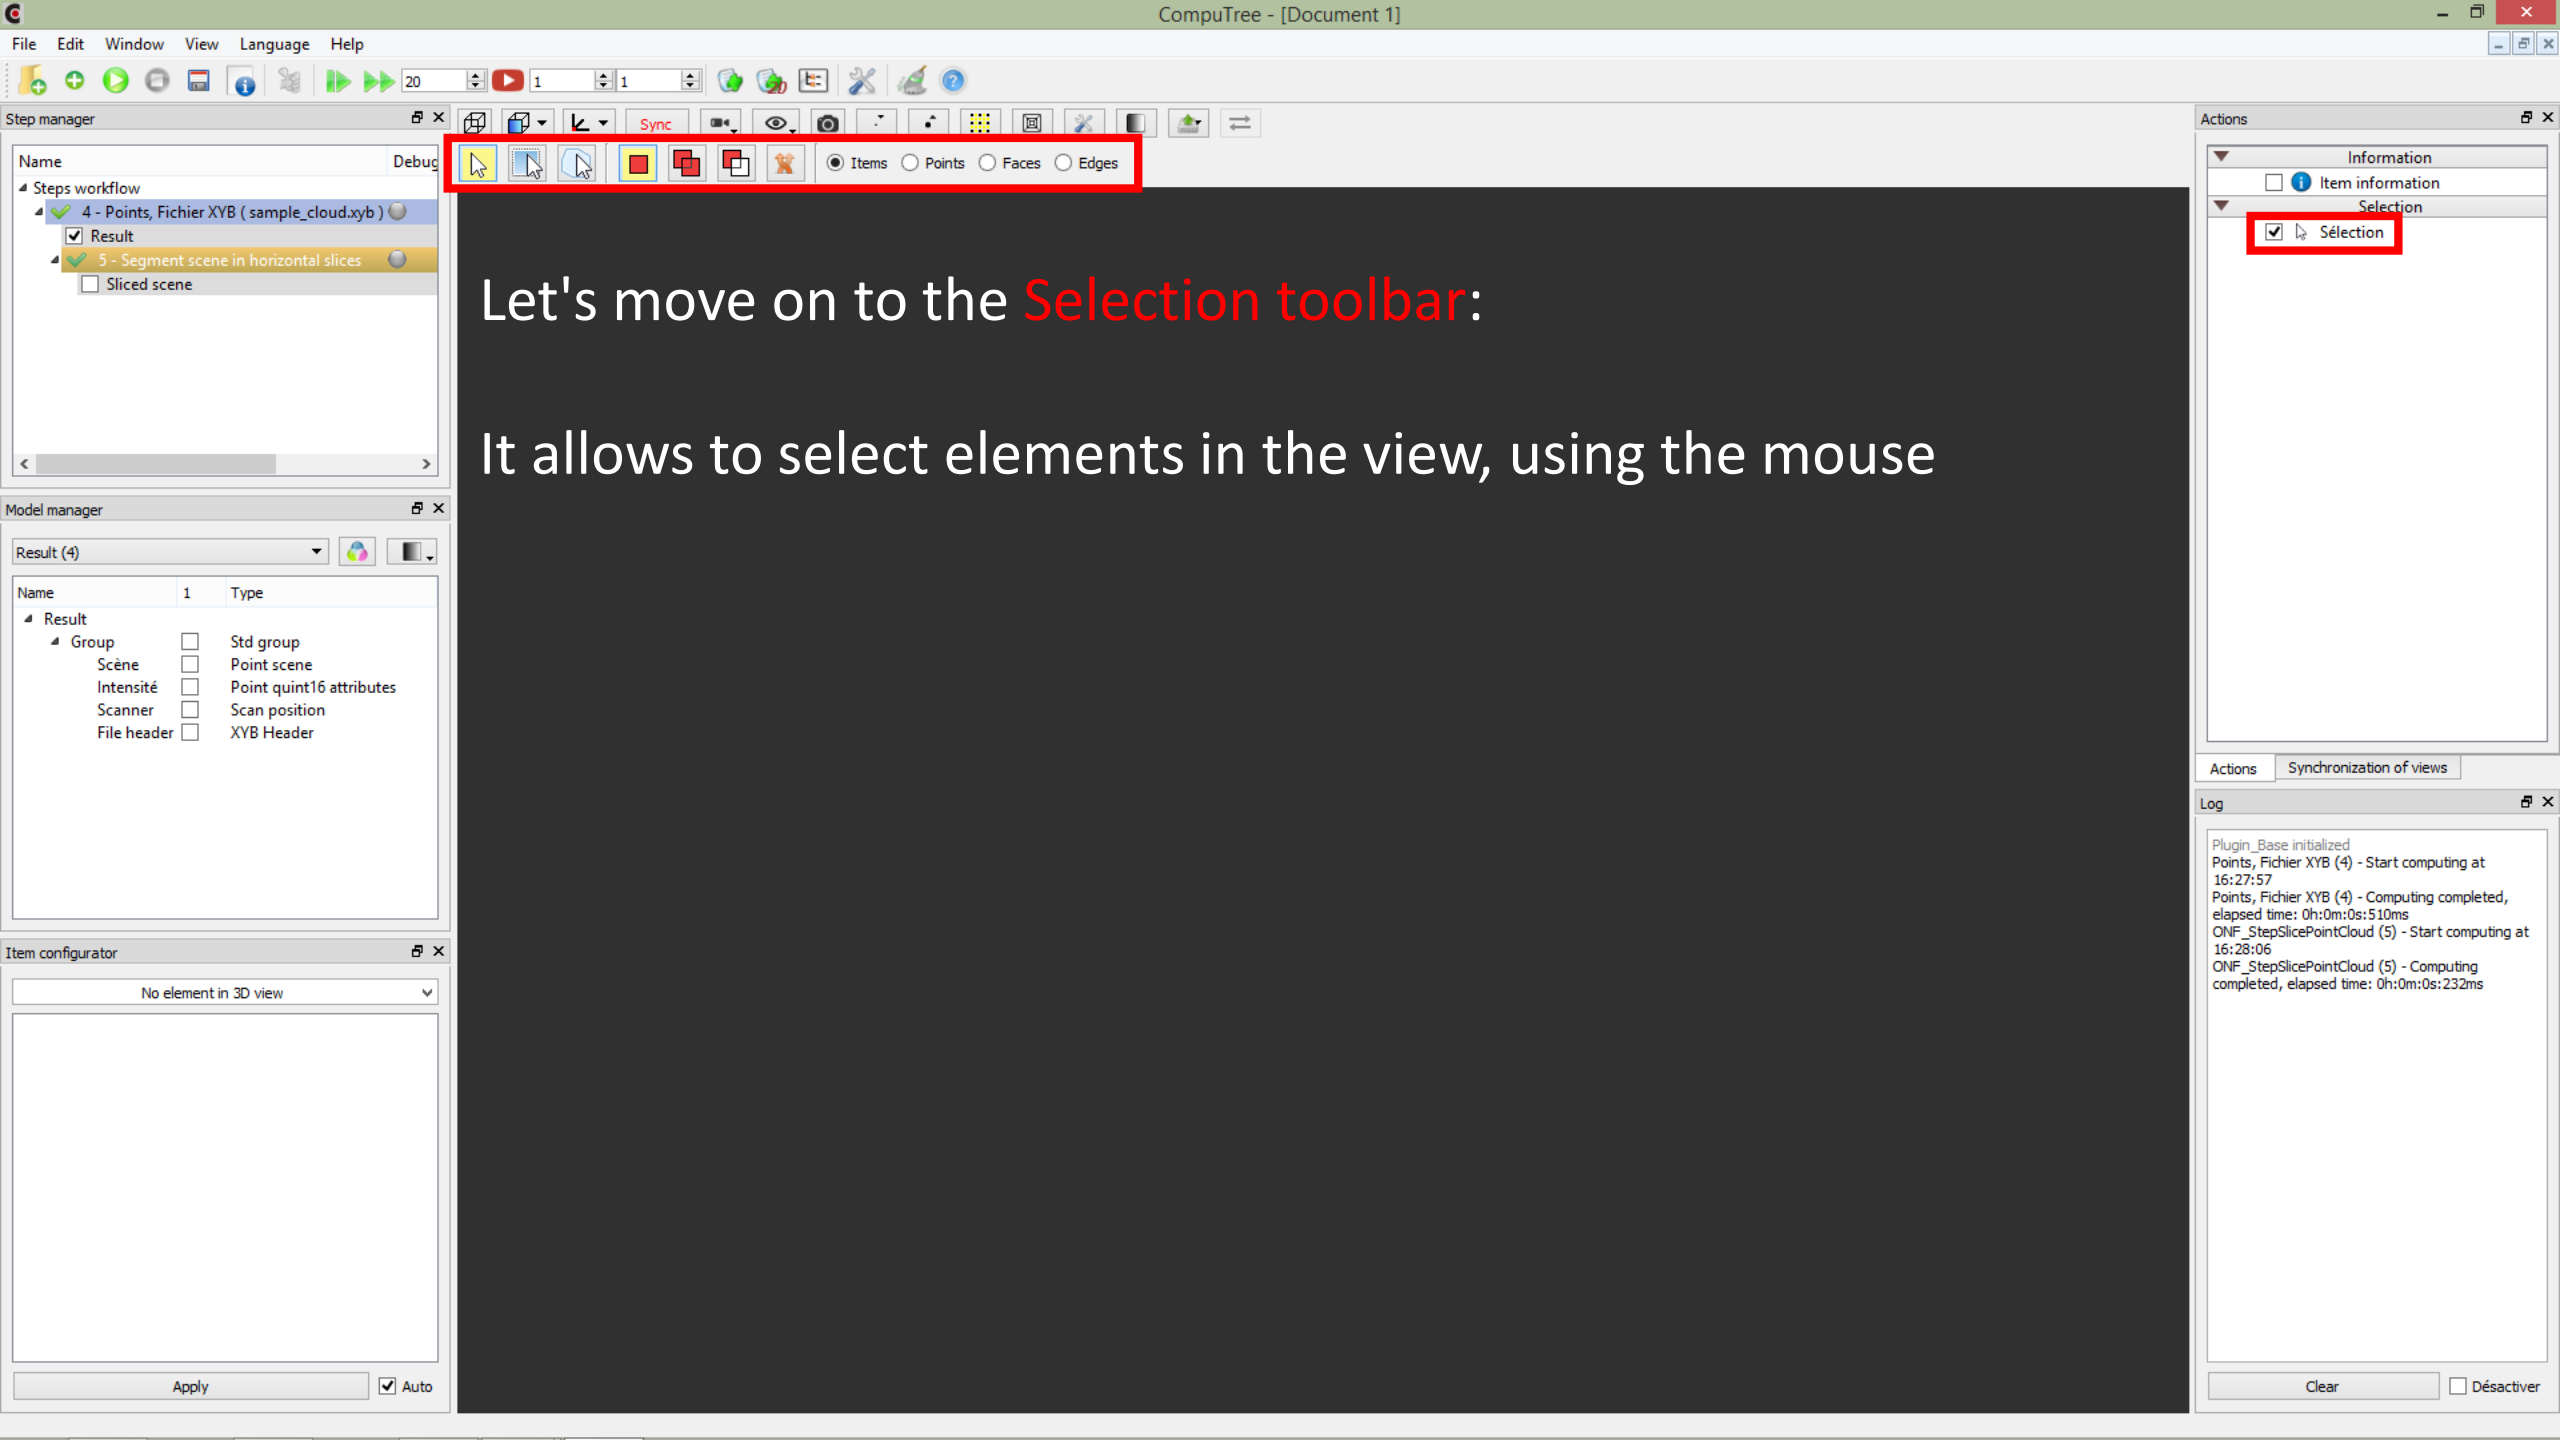

The 14th button allows to export the items, currently selected in the view.

The output formats are sorted by plugins.

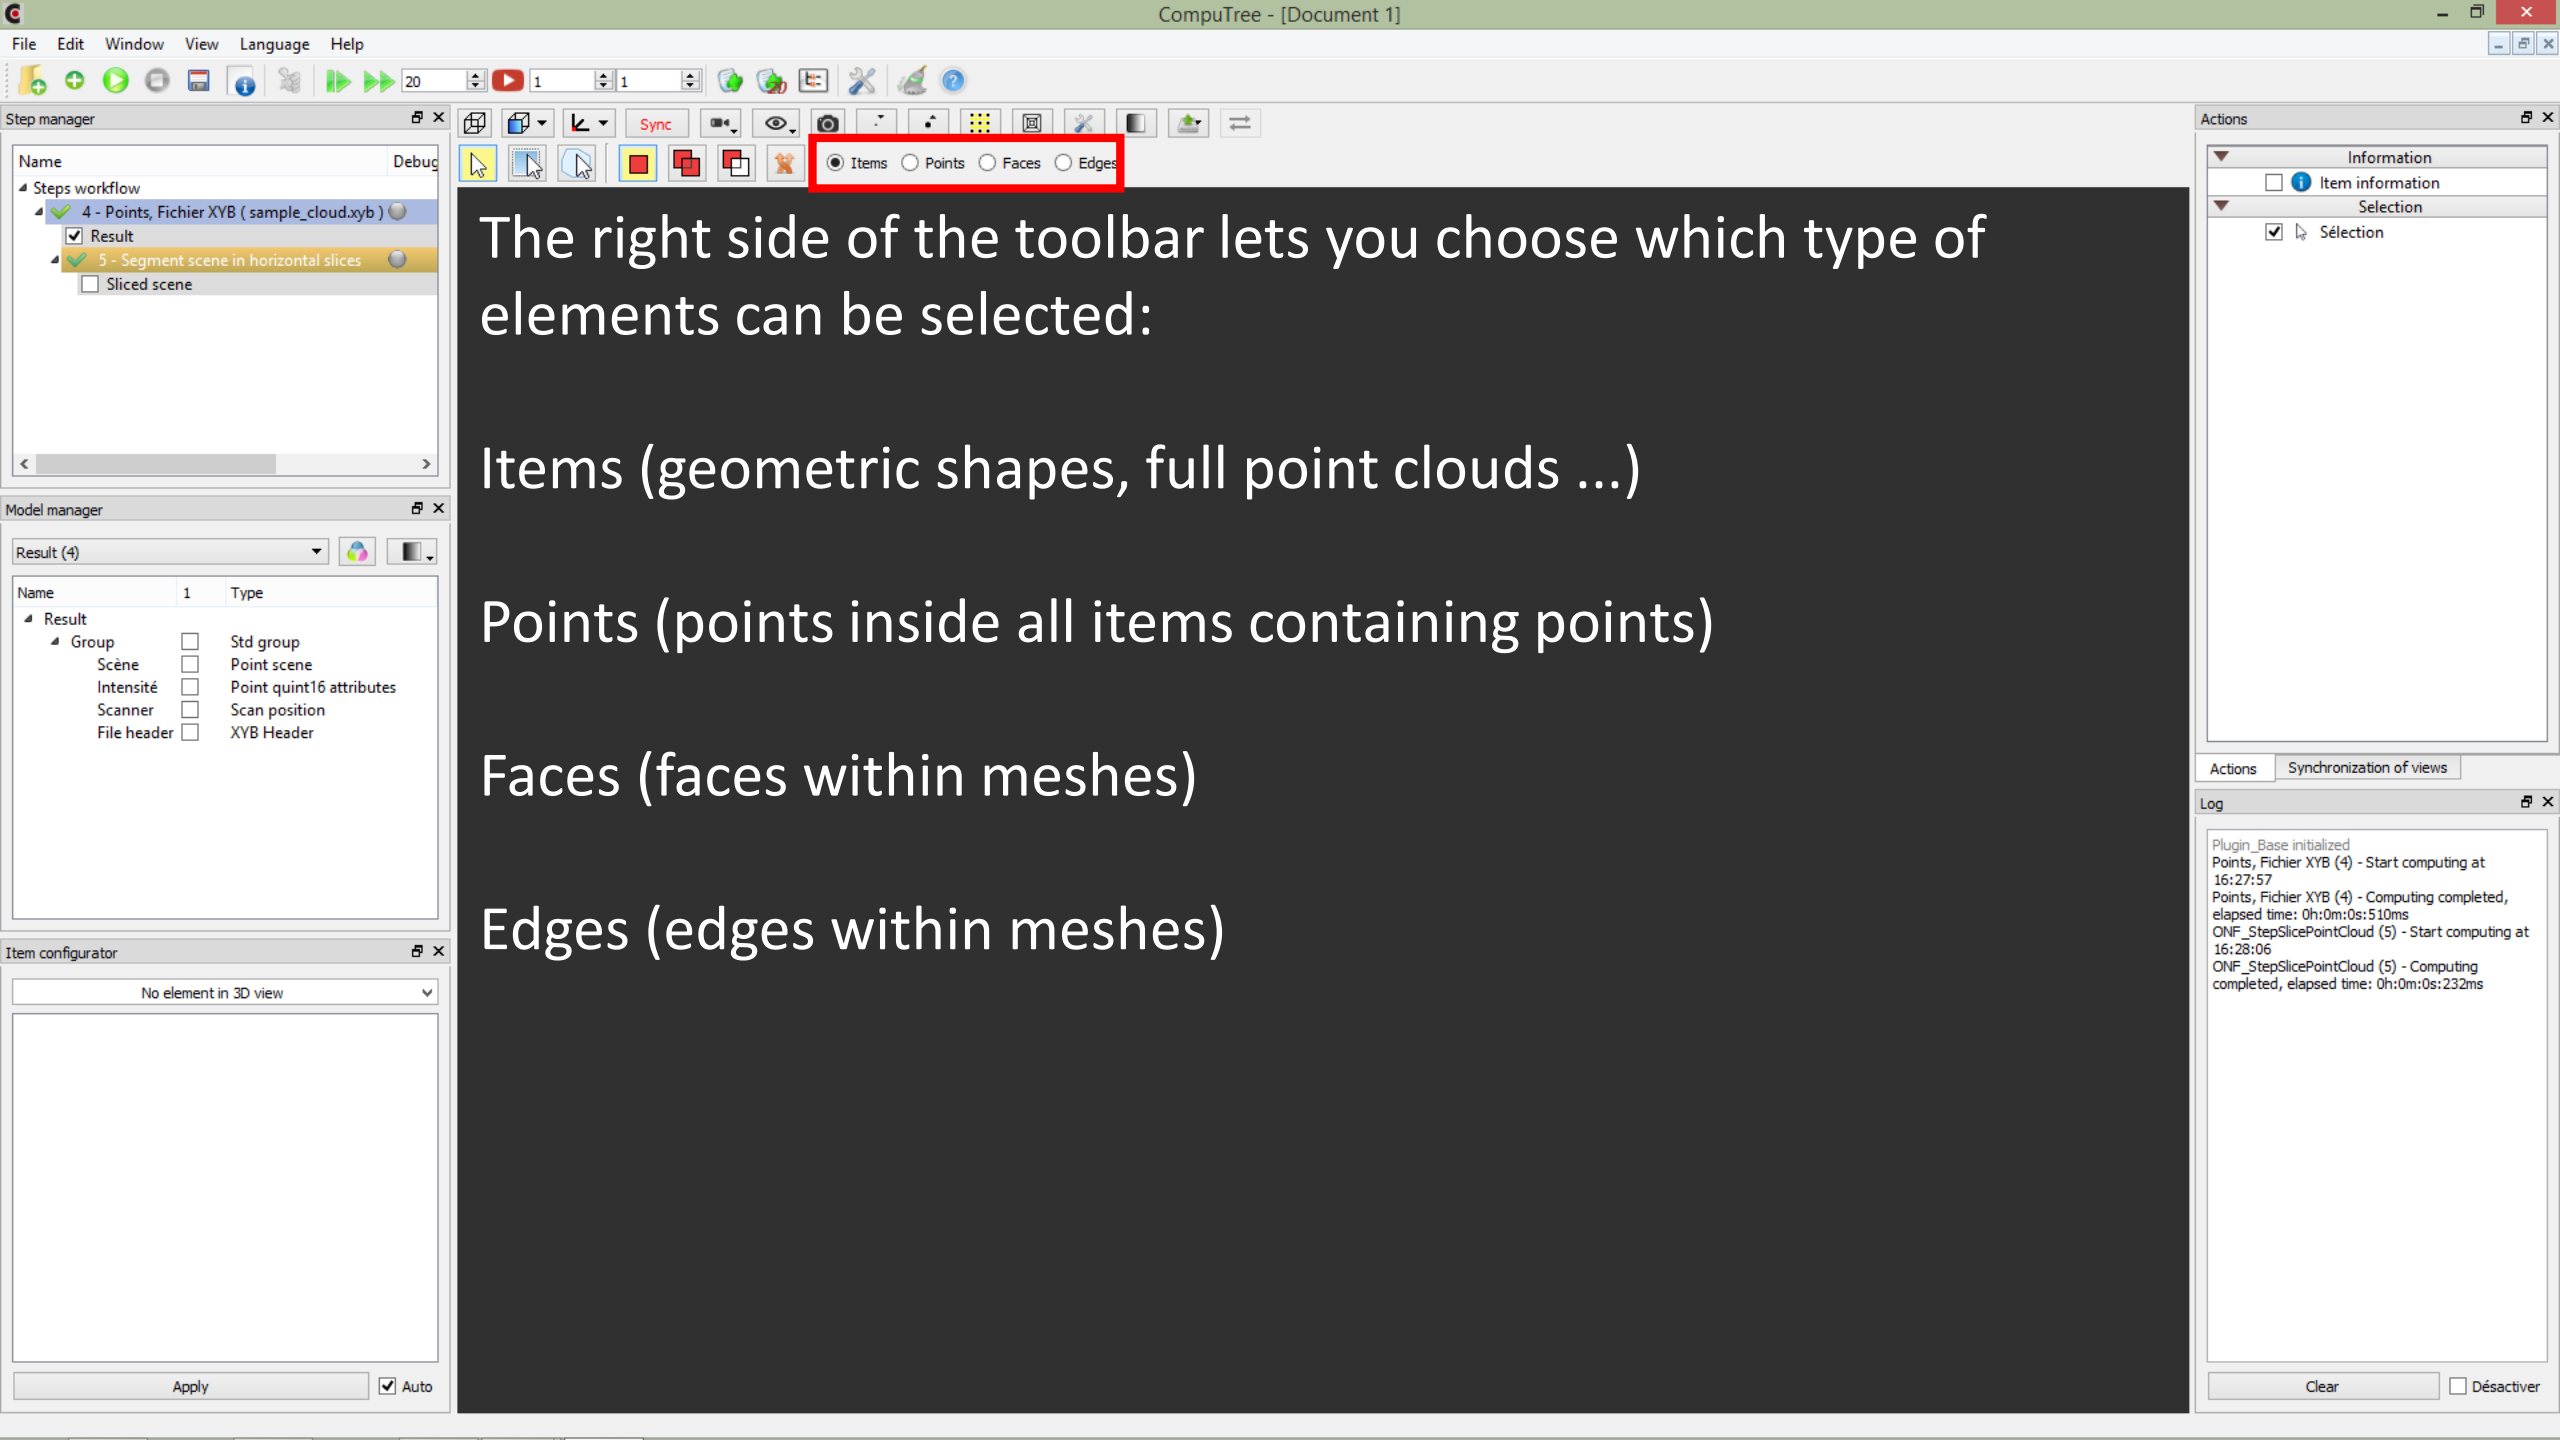

NB: User must take care to choose a format adapted to the selected items (at the moment Computree does not know how to select compatible formats automatically).

Let's move on to the **Selection toolbar**:

It allows to select elements in the view, using the mouse

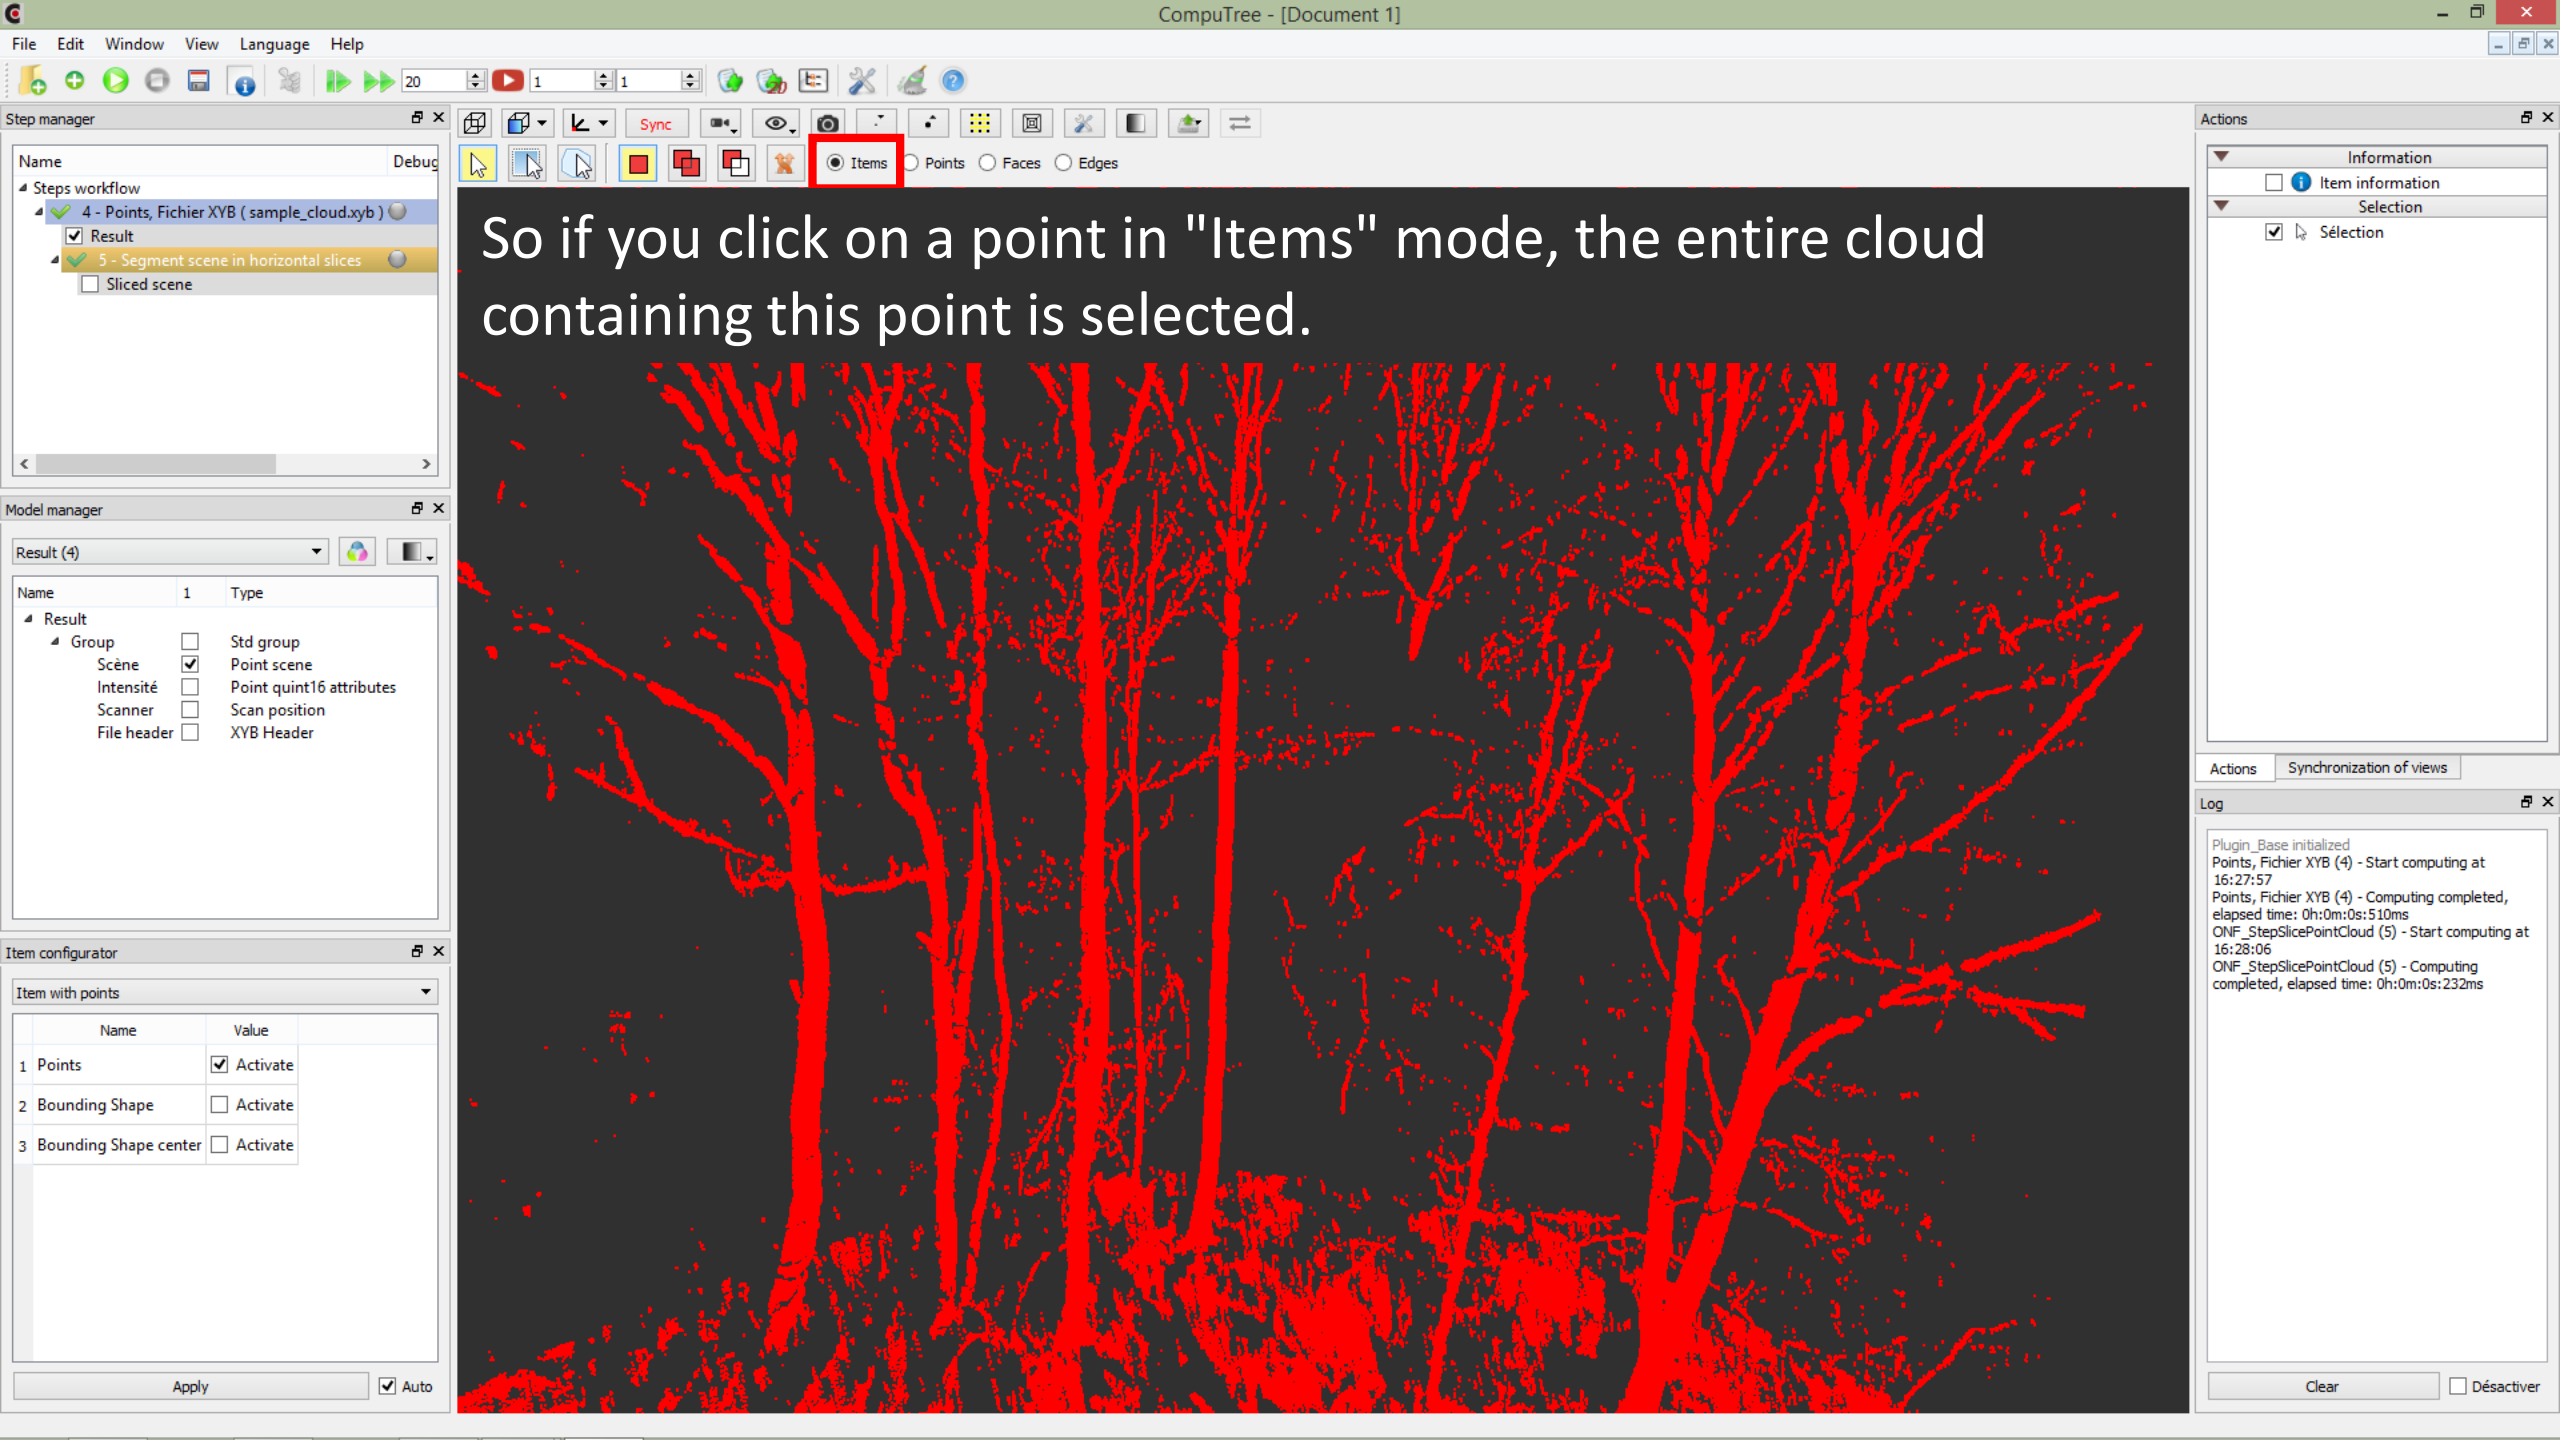

The right side of the toolbar lets you choose which type of elements can be selected:

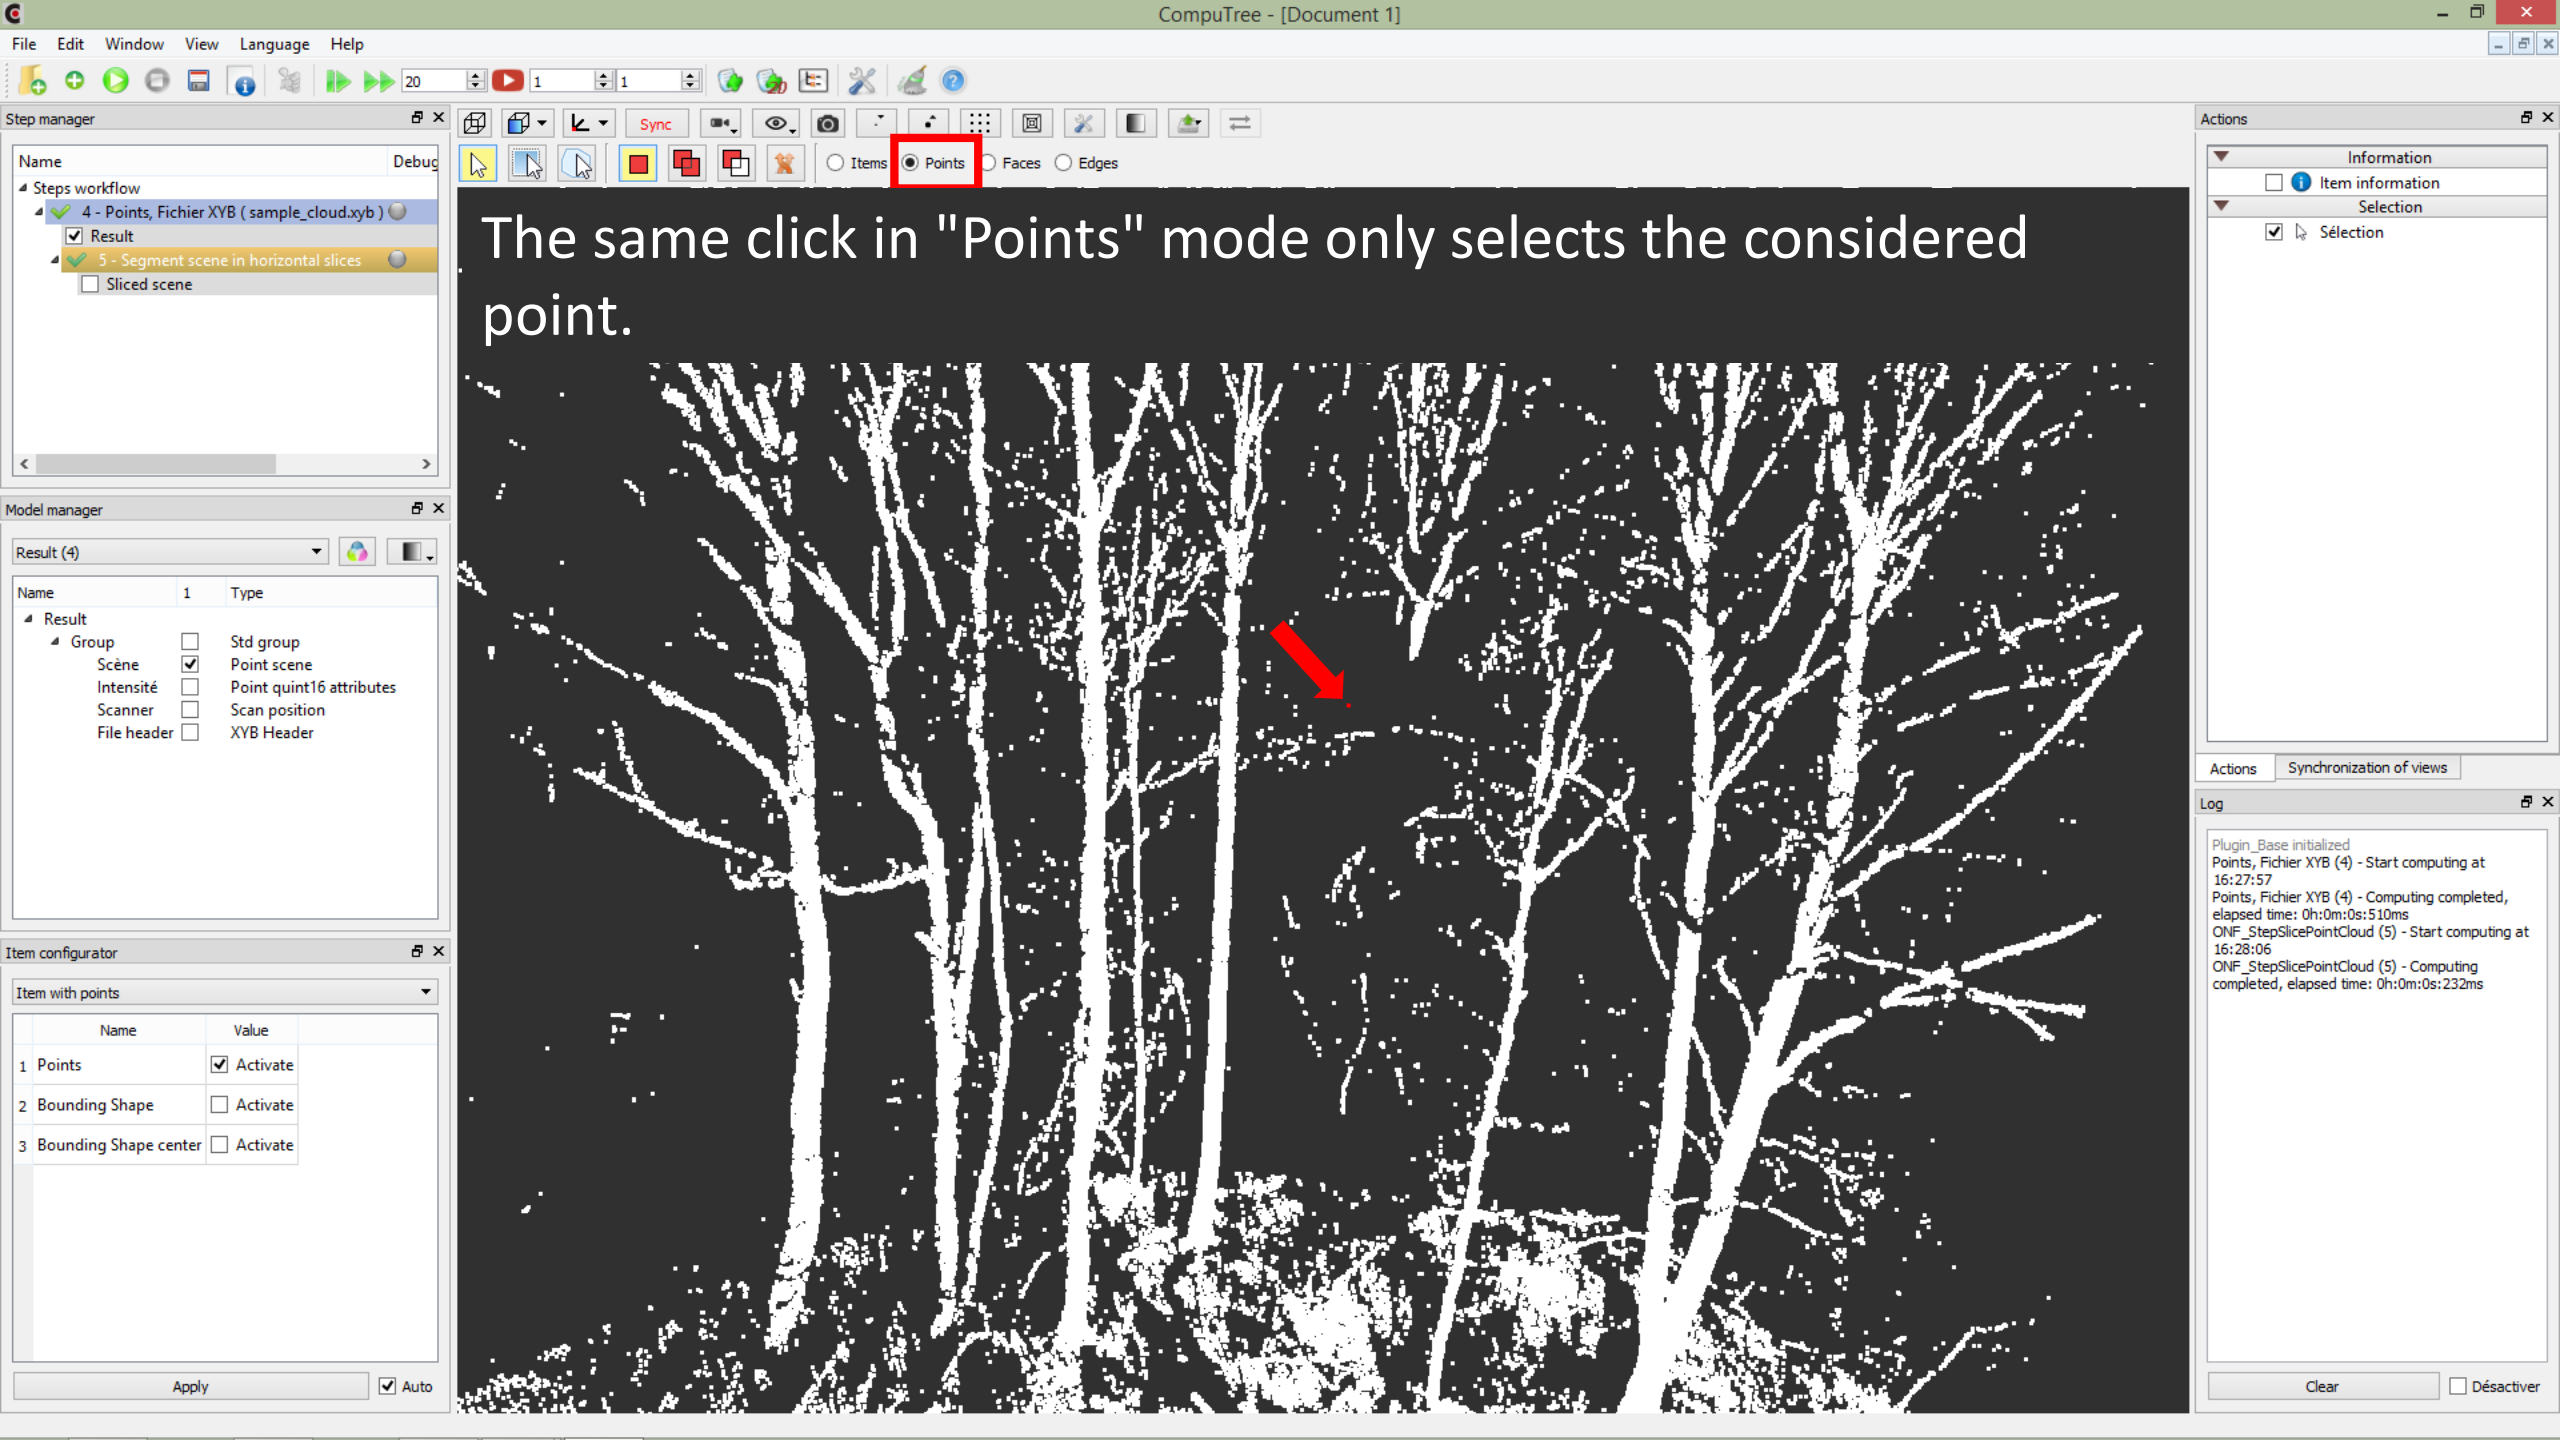

Items (geometric shapes, full point clouds ...)

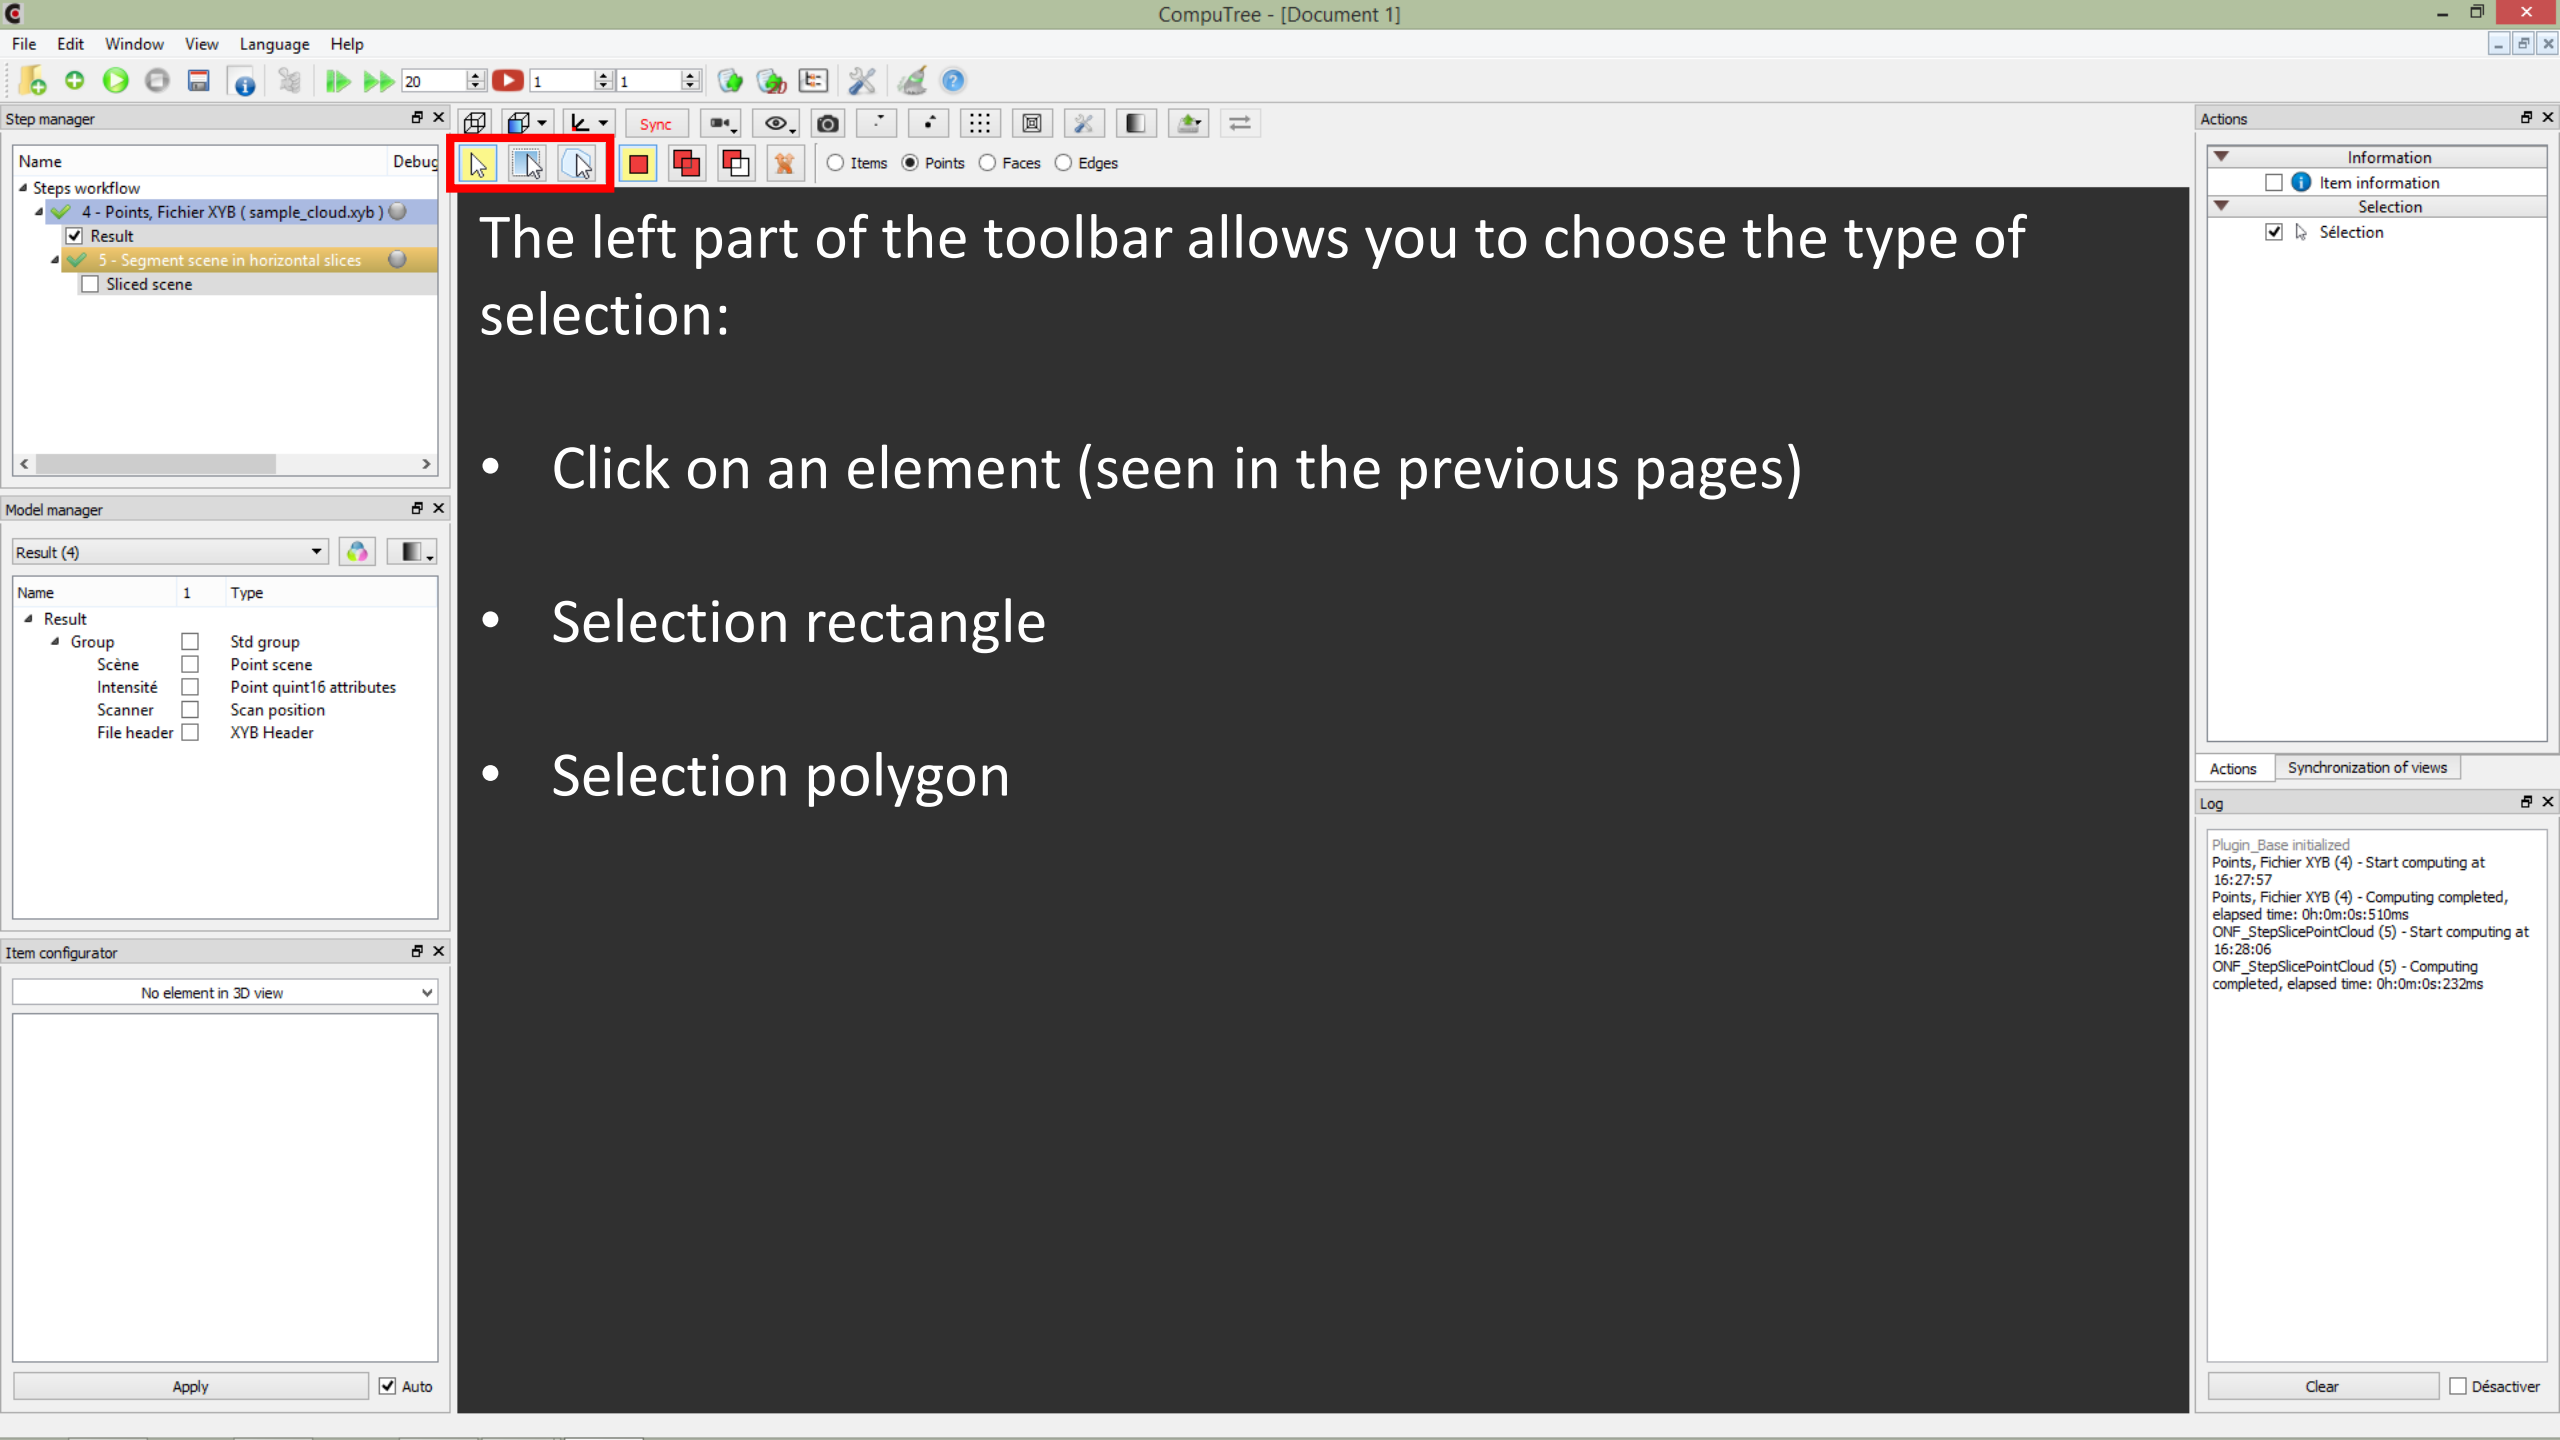

Points (points inside all items containing points)

Faces (faces within meshes)

Edges (edges within meshes)

The left part of the toolbar allows you to choose the type of selection:

- Click on an element (seen in the previous pages)
- Selection rectangle
- Selection polygon

Group	<input type="checkbox"/>	Std group
Scène	<input checked="" type="checkbox"/>	Point scene
Intensité	<input type="checkbox"/>	Point quint16 attributes
Scanner	<input type="checkbox"/>	Scan position
File header	<input type="checkbox"/>	XYB Header
- Item configurator:** Shows the "Item with points" dropdown. Below it, a table lists the items in the model:

	Name	Value
1	Points	<input checked="" type="checkbox"/> Activate
2	Bounding Shape	<input type="checkbox"/> Activate
3	Bounding Shape center	<input type="checkbox"/> Activate

In polygon selection mode:

1. Left click to define each vertex of the polygon

The screenshot displays three panels from the QGIS application:

- Step manager:** Shows a workflow with two steps:
 - Step 4: "4 - Points, Fichier XYB (sample_cloud.xyb)" with a checked "Result" checkbox.
 - Step 5: "5 - Segment scene in horizontal slices" with a checked "Sliced scene" checkbox.
- Model manager:** Shows the "Result (4)" dropdown. The "Group" is expanded, showing a list of items:

Name	1	Type
Group	<input type="checkbox"/>	Std group
Scène	<input checked="" type="checkbox"/>	Point scene
Intensité	<input type="checkbox"/>	Point quint16 attributes
Scanner	<input type="checkbox"/>	Scan position
File header	<input type="checkbox"/>	XYB Header
- Item configurator:** Shows the "Item with points" dropdown. The table below is visible:

	Name	Value
1	Points	<input checked="" type="checkbox"/> Activate
2	Bounding Shape	<input type="checkbox"/> Activate
3	Bounding Shape center	<input type="checkbox"/> Activate

In polygon selection mode:

1. Left click to define each vertex of the polygon
2. We validate (ENTER) a first time to close the polygon

1. Left click to define each vertex of the polygon
2. We validate (ENTER) a first time to close the polygon
3. We validate (ENTER) a second time to select the points

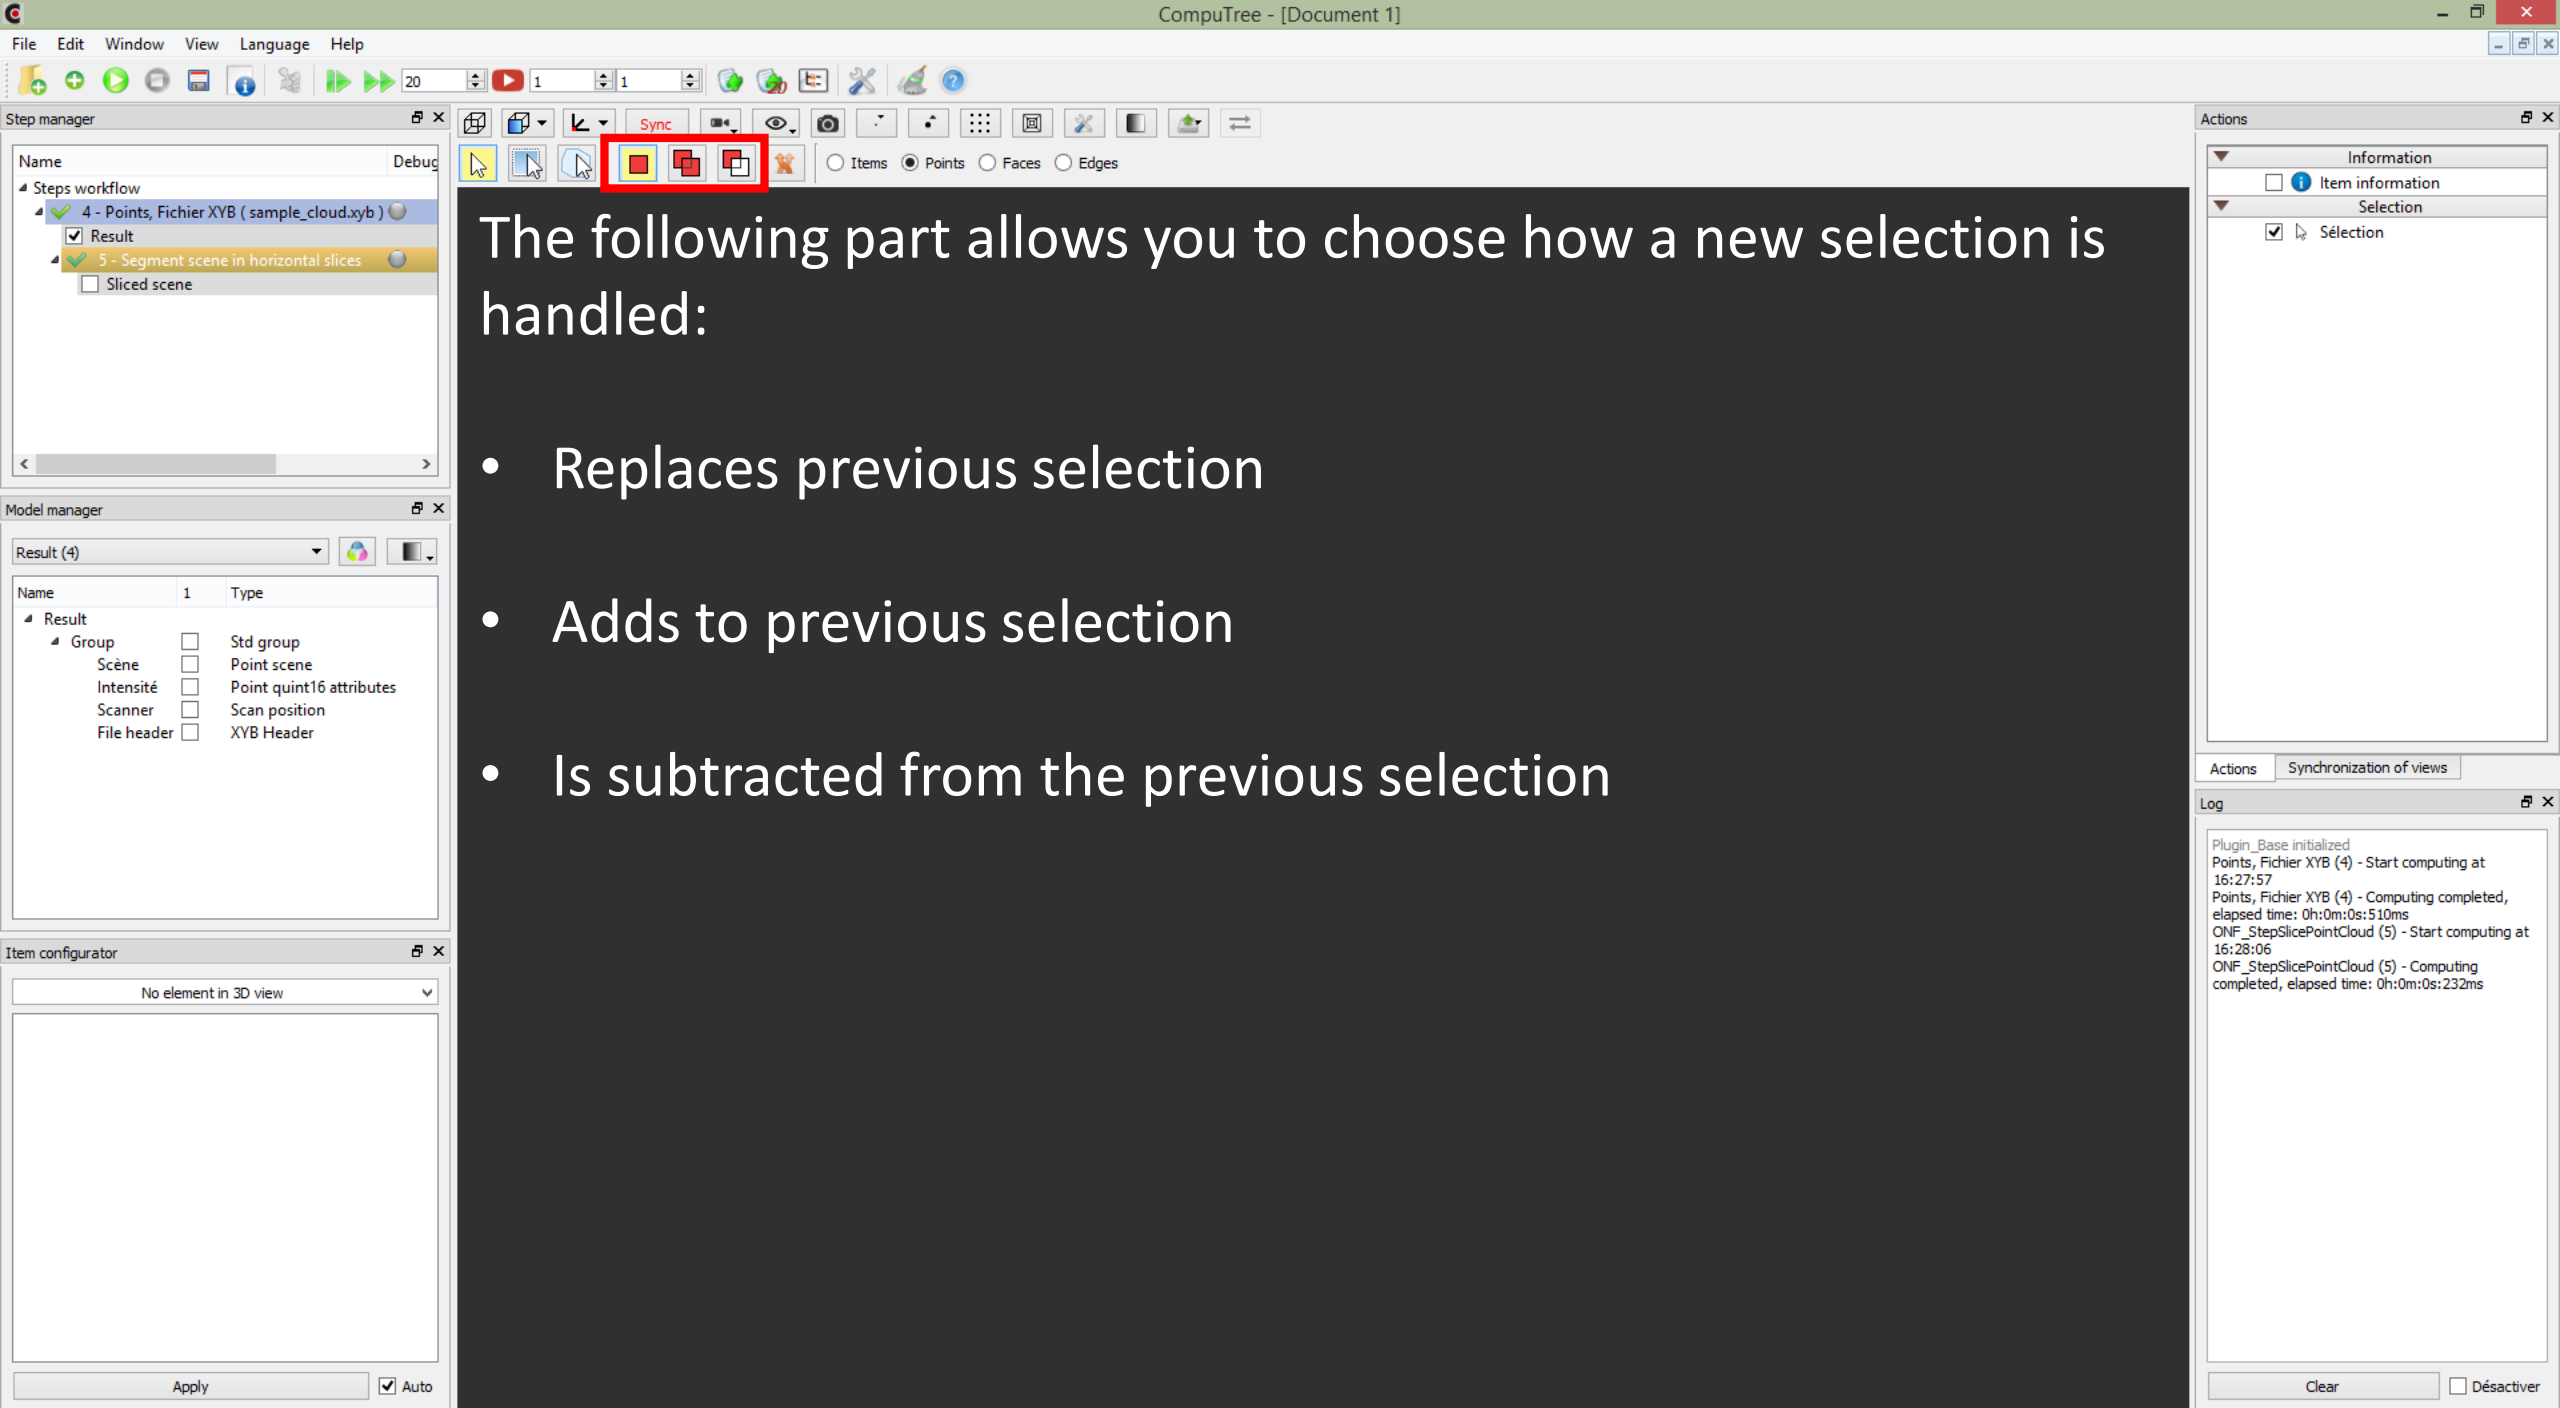

NB: in step 2, one can move or modify the vertices of the polygon, as for rectangle selection mode

In polygon selection mode:
